Item	Data
Crane type	BGL GROUP C.0.11.710
Design	Overhead travelling crane with top slewing luffing jib, with climbing feature
Type of setup	Stationary or travelling
Basis of calculation	EN
Payload torque	max. 8000 kNm
Hoist winch	Hw 40132FU

2 Load carrying capacities

2 Load carrying capacities

NOTICE

WOLFF-Boost

With the WOLFF-Boost function, the load is allowed to exceed the load torque range specified for the lifting capacities by up to 10%. This is, however, subject to the restriction that hoisting gear and trolley drive (trolley crane) respectively hoisting gear and derrick gear (luffing crane) must only be moved alternately.

JL				Jib length												
LCC				Load carrying capacity												

The load carrying capacity is related to a tower height of 40.5 m. Tower heights greater than that reduce the maximum load carrying capacity by the weight of the additional hoisting ropes (one fall operation = 5.04 kg per meter of the hook range).

	30	3.0 – 15.6		38.8	30.8	25.5										
JL		Jib length														
LCC		Load carrying capacity														

The load carrying capacity is related to a tower height of 40.5 m. Tower heights greater than that reduce the maximum load carrying capacity by the weight of the additional hoisting ropes (triple-reeving mode = 15.12 kg per meter of the hook range).

2 Load carrying capacities

2.6 Table of load carrying capacities (kg) in meter intervals, WOLFF 700 B (3 fall operation)

3 Tower combinations

DANGER

Usage of incorrect tower combinations.

The slewing tower crane may overturn.

- 1) Use the specified tower combinations.
- 2) If you need another tower combination that is not specified here, please contact WOLFFKRAN to get an approved alternative setup in writing.

NOTICE

All tower combinations apply to free standing slewing tower cranes without climbing gear.

NOTICE

All tower combinations apply to free standing slewing tower cranes without climbing gear and without auxiliary hoist.

3 Tower combinations

3.1 Tower combinations on foundation (slewing section with HT 23 - connection)

Jib length		30 m – 35 m

4 Foundation loads / central ballast weights / corner loads in compliance with EN 14439 / EN 13001

4 Foundation loads / central ballast weights / corner loads in compliance with EN 14439 / EN 13001

	DANGER
	<p>Usage of incorrect tower combinations. The slewing tower crane may overturn.</p> <ol style="list-style-type: none">1) Use the specified tower combinations.2) If you need another tower combination that is not specified here, please contact WOLFFKRAN to get an approved alternative setup in writing.

Jib positions

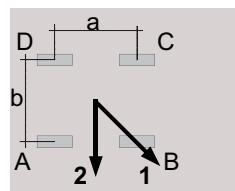

The corner loads are given for two jib positions with the maximum corner load resulting from jib position 1.

For square setup, the following equation is true: $a = b$

For rectangular setup, the following equation is true: $a > b$

Cross frame or cross frame element

Undercarriage

NOTICE! For undercarriage details, please refer to the relevant operating manual.

Wind load with crane out of service

The stability for stormy weather is calculated on the basis of wind region C (EN 13001-2). The reference wind speed for zone C is 28 m/s (10 m above ground, averaged over 10 minutes). As a basis, a recurrence interval of 25 years is used. As a basis, a recurrence interval of 25 years is used.

Please contact WOLFFKRAN for stability calculations in other wind regions.

For information on the different substructures, refer to Section 5 of the Operating Manual.

4 Foundation loads / central ballast weights / corner loads in compliance with EN 14439 / EN 13001

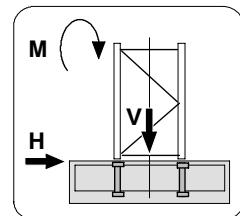

4.1 Foundation loads jib 30 m - 35 m

Slewing section 700 B with 30 m – 35 m jib on foundation.

Slewing tower crane without climbing device.

Foundation load in compliance with EN 14439 / EN 13001 – typical loads

Includes all dynamical factors under consideration of second-order theory for stationary slewing tower cranes on concrete foundation in compliance with a tower combination without climbing device.

6 Out of service positions

! WARNING

Parking the jib outside the area for the out of service position.

The slewing tower crane may overturn.

- Park the jib only in the grey shaded area for the out of service position.

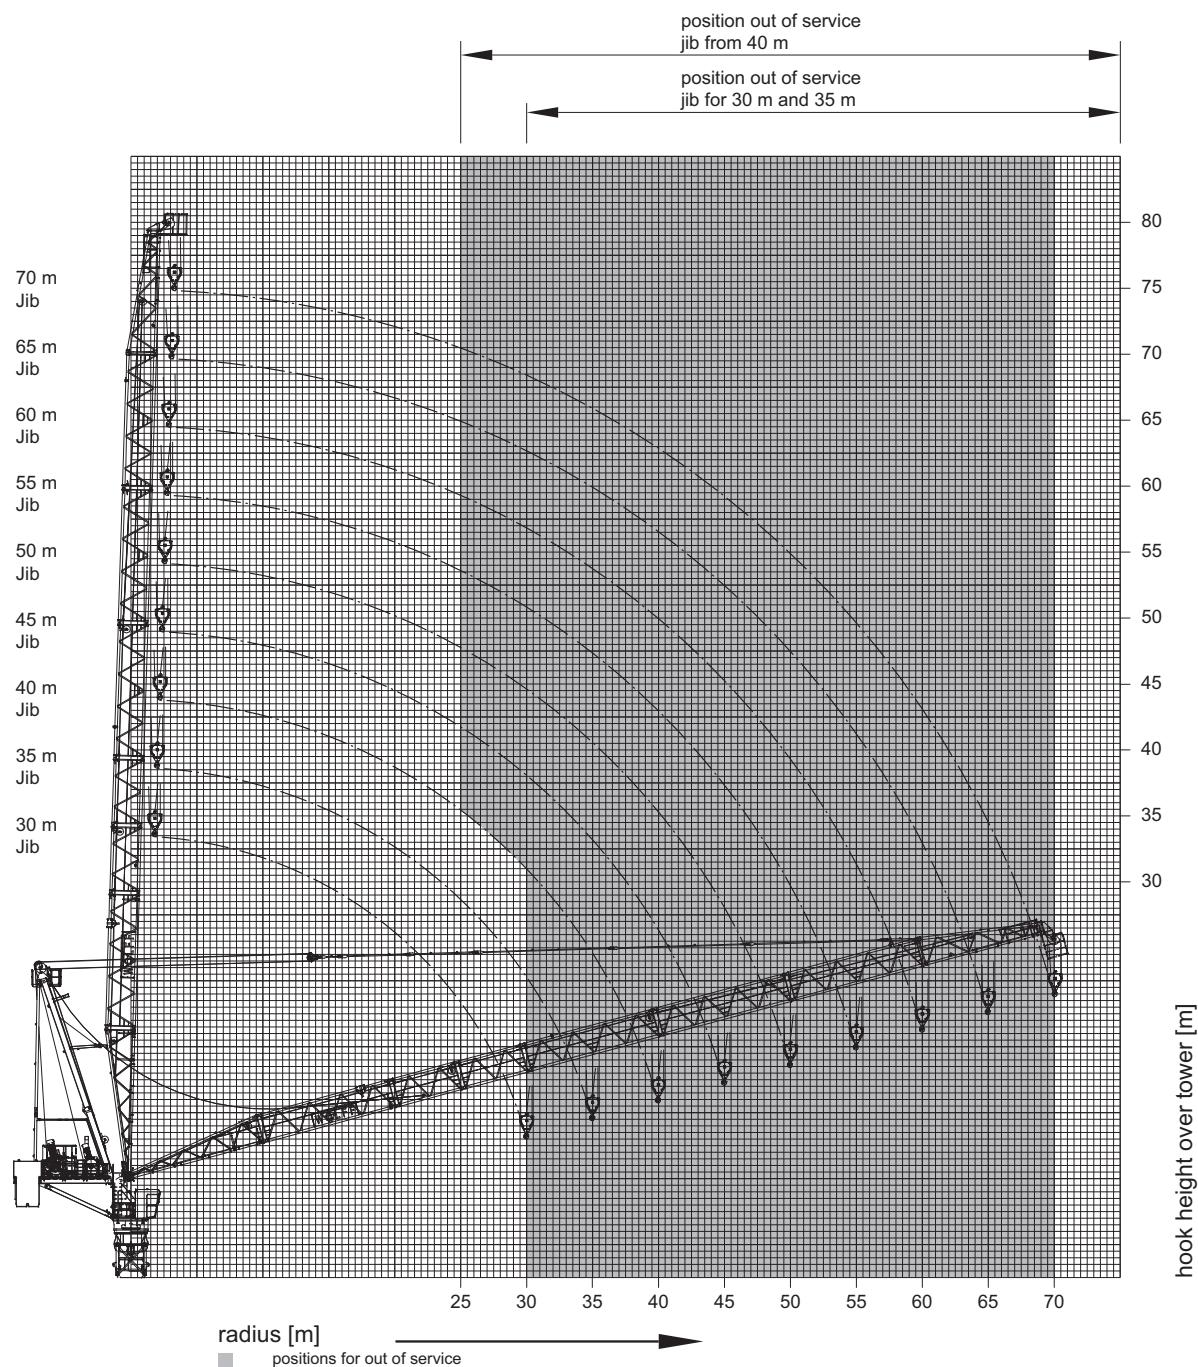

NOTICE

Out of service position with smaller operating radius.

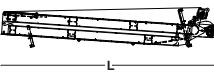

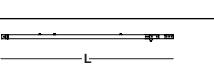

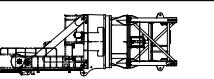

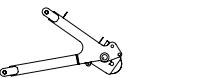

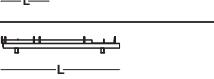

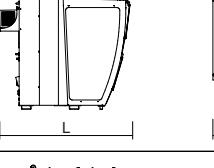

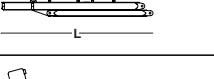

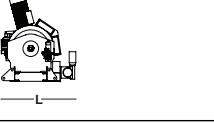

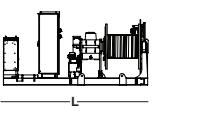

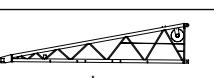

At your request, shutdown with smaller operating radius can be implemented in cases of reduced tower height or increased central ballast, and possibly use of a wind sail. Please contact WOLFFKRAN for information.

8.6 Required hook height for mobile cranes

For information about the height of the WOLFF slewing tower crane, refer to Tower combinations [13].

NOTICE! During assembly, allowances must be made for level differences (mobile crane to base of the slewing tower crane).

Hook height above ground required for mobile cranes (X) = height of the WOLFF slewing tower crane (A) + clearance of 29 m (B).

Exemplary illustration

[A]	Height of the WOLFF slewing tower crane	[B]	Clearance 29 m
[X]	Hook height above ground required for the mobile crane		
1	Substructure	7	Jib
2	Tower element	8	4-fall attachment (4 m with shackle)
3	Counterjib with luffing gear platform	9	Tower head section lower part
4	4-fall attachment (4 m with shackle)	10	Two-point lifting tackle (4 m with shackle)
5	Upper tower head section	11	Hoisting winch platform, complete
6	Two-point lifting tackle (3 m with shackle)	12	Four-fall attachment (2 m with shackle)

10 Suitable climbing devices

This section contains information on

- Outer climbing devices (KWH)
- Inner climbing devices (KSH)

	NOTICE Details on the climbing device Always refer to the details in the documentation of the climbing device.
	NOTICE The operating radius specified is measured from the tower center and is to be considered a reference value. Exact balancing can be achieved by changing the operating radius with the tower elements or loads specified in the table.
	NOTICE Details for climbing balancing The climbing balancing details obtain to the double reeving hook block which includes that the Hook position is on the same height as at hook heights in height of the bottom edge of the tower head section lower part (hook height = tower height).
	NOTICE If feasible, preferably operate your climbing device without balancing weight.

10 Suitable climbing devices

10.1 Outer climbing devices

	DANGER
	<p>Climbing device attached to the lower part of the tower head section lower part.</p> <p>Increased wind surface. The slewing tower crane may overturn.</p> <p>► Dismantle the climbing device after the climbing procedure is finished or lower the climbing device down on the ground or lower the climbing device down to the uppermost tower brace.</p>
	NOTICE
	<p>Tower element on the transfer carriage</p> <p>The data on climbing balance was specified under the assumption that a tower element is on the transfer carriage.</p>

10.1.1 Outer climbing device KWH 23 / KWH 23.1

Climbing radius [m] for the balancing weights

700 B	Jib length [m]

Weight = 5.0 t	-	-	-	-	-	-	30.6	32.0	-
Weight = 10.0 t	-	-	-	-	-	-	-	23.2	24.2

10 Suitable climbing devices

10.2 Inner climbing devices

NOTICE

The data required and the instructions for tower assemblies with inner climbing device is available in the separate description of the inner climbing device.

DANGER! Observe the special tower combination for the inner climbing device.

NOTICE

Clamping forces for the inner climbing device (KSH) are specified based on a building height of < 250m and wind category C 25.

10.2.1 Inner climbing device KSH 23/ KSH E 23

	NOTICE
Lower clamping length for the inner climbing device KSH 23 / KSH E 23. Subject to coordination with WOLFFKRAN, it is also possible to realize a clamping length of 10.0 to 15.5 m with a lower tower height. Contact WOLFFKRAN to discuss this option.
